

## JSON scheme for LMEDS "list.json"

### audio

type: string

required: yes

description: filename of audio recording. No extension

example:

"audio": "phrase1"

### text

type: string

required: yes

description: text that will be marked by the user for prominent words or boundaries

example:

"text": "however don't actually go onto the Johnson Expressway"

Please play sound, then mark **boundaries**

In normal speech, speakers group words in a way that helps listeners interpret the utterance. Break the text into chunks that reflect this grouping

If you want to go to Gina's Pizza Shop, I can tell you the best way to get there. Go straight down this street and follow the signs for the Johnson Expressway.

[CLICK TO PLAY](#)

however don't actually go onto the johnson expressway

☐ No boundaries heard

### context

type: string

required: yes

description: longer paragraph of text that appears above the play button

example:

"context": "If you want to go to Gina's Pizza Shop..."

Please play sound, then mark **boundaries**

In normal speech, speakers group words in a way that helps listeners interpret the utterance. Break the text into chunks that reflect this grouping

If you want to go to Gina's Pizza Shop, I can tell you the best way to get there. Go straight down this street and follow the signs for the Johnson Expressway.
